

## Lightfusion™ – light your way to beautiful skin

LightFusion™ and its proprietary Hydrogel Mask have been specifically developed to give visible results in just one treatment by stimulating cellular process that work below the skin creating long lasting beautiful skin.

Our skin works hard to protect us from harmful elements in the external environment and also reflects our internal well-being so it is important to integrate effective treatments to strengthen and boost the skin from the inside out.

LightFusion™ is a totally natural, non-invasive treatment that is clinically proven to boost collagen, increase hydration and improve microcirculation in just 10 minutes.

### Light is a new and exciting addition in skin therapy

We are all influenced by the power of light and the benefits of light therapy to our wellbeing are well documented as well as being recognised in modern medicine for many years. Lightfusion™ has been developed to harness the power of light, and deliver it as a safe and effective treatment that can be incorporated into a relaxing facial procedure

The benefits of a single Lightfusion™ photofacial include energising tired skin and a course of treatments can tackle skin ageing problems and sensitivity.

- Proven treatments with visible results
- Protocols to improve Skin's hydration, firming, signs of ageing, redness and minor skin problems
- Safe, effective, non-invasive therapy
- Treats all skin types, all year round
- No side effects, no pain, no redness and no irritation
- No recovery time needed
- Quick and simple treatment
- Promotes the body's own natural healing response

## Frequently Asked Questions

### Q1 Is the treatment effective?

**A1** Yes. The LEDs chosen for LIGHTFUSION™ are dual wavelength, this means that they can emit both red and near infra-red light at the same time. Both of these wavelengths have been shown to stimulate the intricate cellular processes that stimulate collagen production, increase skin elasticity and promote greater blood flow and tissue oxygenation.

### Q2 Who is suitable for LIGHTFUSION™?

**A2** Because LIGHTFUSION™ creates no heat it's suitable for all skin types, and is clinically proven to treat fine lines, hyperpigmentation, improve skin tone and texture and reduce inflammation.

### Q3 What is the treatment like?

**A3** The LIGHTFUSION™ treatment is just like a facial but the effects go much deeper and are more visible and longer lasting. Following deep cleansing, the LIGHTFUSION™ Hydrogel Mask is applied which is cooling and deeply hydrating and the device is then applied over this. After 10 mins both are removed and aftercare skincare is applied to the skin. You will be given a skincare product to use at home on the evening of the treatment that has been specially formulated to enhance the effect of the treatment and maximise the receptive nature of the skin following LIGHTFUSION™.

### Q4 Does it cover the entire face?

**A4** It doesn't need to. Scientific research has shown that the effect of low level light therapy spreads throughout the tissue. Just like one rain drop in a lake, the effect of one drop ripples out and spreads much wider than the original rain drop. The LIGHTFUSION™ treatment pads have been specially designed to cover as much as the face as possible while not being claustrophobic like traditional panel type LEDs.

### **Q5 Is it hot?**

**A5** No unlike traditional filament bulbs LEDs do not contain a filament. They produce light energy with very little thermal energy. The LIGHTFUSION™ treatment heads do not get hot nor feel hot against the skin.

### **Q6. Will it damage my eyes?**

**A6** No. LIGHTFUSION™ has been tested to the international standard for eye safety EN62471. In addition the design of the therapy heads means that the device does not directly shine into your eyes, which means the treatment is more comfortable and less claustrophobic than traditional LED devices.

### **Q7 Will it help my products to penetrate better?**

**A7** Yes. Low level light therapy increases blood flow and tissue oxygenation within skin treated with red and near infra-red light, helping the skin utilise active ingredients more effectively.

### **Q8 Can I combine LIGHTFUSION™ with other aesthetic treatments?**

**A8** Yes. Lightfusion™ will enhance and accelerate the results from other treatments particularly facials, microdermabrasion, peels, microneedling and fillers and you can use LIGHTFUSION™ after laser treatment to reduce downtime. Because LIGHTFUSION™ builds healthy skin from the inside out it compliments other treatments that work in other ways.

## **Q9** What results can I expect and how long will they last?

**A9** After a single Photo Facial skin may feel firmer and tighter with a reduced pore size, skin will feel softer and smoother due to the instant hydration and the enhanced absorption of the ingredients in the hydrogel mask.

Your complexion will look more vibrant and fresher due to the increased blood flow, tissue oxygenation and increased cellular ATP. A course of 4 treatments will help improve fine lines and wrinkles and will improve skin firmness, elasticity and any pigmentary issues.

Results can last for several months following a course of 4 LIGHTFUSION™ Photofacials however maintenance sessions are advised to ensure longer lasting results.

## **Q10** Can I over treat?

**A10** No, because LIGHTFUSION™ uses the non-thermal properties of photobiomodulation, it does not damage skin cells. During a treatment skin cells reach a light absorption level at which point they no longer absorb light.

## **Q11** Is it claustrophobic?

**A11** No unlike other traditional LED panel systems that surround the face LIGHTFUSION™ is specifically designed to deliver a comfortable Photo Facial to the skin; it does not cover the eyes or feel heavy on the skin.

The LED's used are the first of their kind delivering two wavelengths at the correct energy from one diode making the device light and enabling treatment times to be reduced to 10 minutes.
